Re: Selkirk Model Direct-Temp™ Direct Venting System

We are pleased to announce that Selkirk's Direct Temp hearth products have complied with all safety requirements outlined in the test standard for Direct Vent Appliances on our Napoleon products with the exception of the GD45 model.

When using Selkirk as an alternate vent system please follow all the same guidelines, currently included in our installation instructions.

At Napoleon we feel that a wider selection of approved venting systems is a benefit to our dealers.

Yours truly,
