SUPERPRO.

TECHNICAL DATA SHEET

FOR THE CHIMNEY PROFESSIONAL WHO DEMANDS THE BEST...

SuperPro incorporates the latest technology in factory-built chimney design; providing superior performance, durability, and safety. SuperPro is designed to accompany today's appliances, which are engineered to produce low emissions and high heat. This makes SuperPro the choice of professionals who are looking for a better-quality, factory built chimney system.

CERTIFICATION & APPLICATIONS

SuperPro is Safety Tested and Listed to applicable UL/ULC Standards. These include:

Canada: ULC S-604

Safety Standard for chimneys serving liquid/gas fuel appliances

This chimney system may be used on appliances that burn Oil or Gas. SuperPro Model SPR may also be used with specific listed factory-built fireplaces listed to UL 127 or ULC-S610.

USA: UL 103-HT

Safety Standards for chimneys serving solid fuel and liquid fuel appliances. This chimney system has been designed for use on wood stoves, fireplaces and residential furnaces in the U. S. market.

Allowable Flue Gas Temperatures are:

Maximum Continuous	1000° F / 540° C
Brief Forced Firing	1400° F / 760° C (60 min.)
Creosote Burn Out	2100° F / 1150° C (3 x 10 min.)

SMART CHOICE LIFETIME WARRANTY

The SuperPro Smart Choice Lifetime Warranty applies to all Chimney components (not just insulated lengths) making SuperPro chimney the smart choice, every time. (See written Warranty for details).

ENHANCED FEATURES

Premium Grade Stainless Steel construction of both the inner liner and outer casing make SuperPro chimney extremely corrosion resistant. Embossed couplers do not allow moisture to penetrate the chimney's outer wall. Sections simply 'twist-lock' together and may be secured with optional Locking Bands. The SuperPro product line features **Deluxe Chimney Support Components** that will enhance any installation.

SUPPORTS/FRAMING

All SuperPro Supports are designed to carry four times the combined weight of each system at maximum allowable height.

CONSTRUCTION

Inner Liner (Flue):	Premium Grade Stainless Steel 0.016" thickness
Outer Casing:	Premium Grade Stainless Steel 0.016" thickness

Note: All SuperPro Twist-Lock Couplers are embossed (not lanced) and seams are weather-proofed to prevent moisture from entering the chimney.

Insulation: The 1" space between the inner/outer walls is Solid Packed with Mineral Wool Fibre insulation to provide superior insulating qualities, in a "slim-line" design. Solid Pack design performs favorably to Blanket type and Air-Cooled chimney designs.

The Best Warranty in the Industry

Selkirk features an advanced engineering design and premium quality material which allow us to offer a Lifetime Warranty on all component parts. See written warranty for details.

Stainless Steel Chimney Lengths

The chimney must extend at least three feet above the highest point where it passes through the roof surface and at least two feet higher than any part of the building within a horizontal distance of ten feet.

HEIGHT REQUIREMENTS

- Slim, advanced design allows for installation between 16" centers
- A 2" clearance to combustible materials must be maintained at all times, except in areas protected by factory supplied support certified for reduced clearance
- Secure twist-lock design couples chimney sections together with just a 1/8th turn
- Sectional overlap of 1-1/8"
- Chimneys are sized according to the inner diameter and are available in 5", 6", 7" and 8"

LOCKING BANDS

- Two flanges engage the curls in each end of the adjoining sections holding them securely together
- Supplied with Captured Nut & Bolt
- Locking Bands must be used:
 - on all sections that make up an offset
 - on tee branch to attach a chimney length
 - on any length suspended below the Cathedral or Roof Support
- While Locking Bands are not required on other chimney lengths, their use is recommended for added safety and stability. It also provides a more attractive appearance

This chart has three columns for elbow angle required to achieve your desired offset. The first column ("Offset") is the horizontal measurement, at the chimney center line, of the offset needed to get around an obstacle. The second column ("Height") is the height of the assembled offset elbow to the top of the return elbow. Column 3 shows the appropriate lengths required.

1. Determine the distance of the offset required
2. On the chart, find the predetermined distance required for the elbow kit under the corresponding chimney diameter
3. After finding the offset, follow across the chart to find the specified height and appropriate chimney lengths required under their corresponding diameters

All measurements in inches. Offset tolerances ± one inch.

ELBOW KITS INCLUDE:

- 2 ELBOWS
- 4 LOCKING BANDS
- 1 ELBOW SUPPORT
- HARDWARE PACK

INSULATED 15° AND 30° ELBOW KITS

- The Insulated Elbow is used when an offset is required
- Locking Bands must be used on all elbows
- A maximum of 6 feet is allowable between elbows
- Elbow is fully insulated and can be used at the same 2" clearance as chimney lengths
- Elbow support must be used with all offset installations
- Elbows do not have locking ridges and can be rotated to attain optimum positioning, and allow chimney to return to correct vertical alignment, prior to installing Locking Bands

Flashings and Storm Collars

To determine what Roof Flashing you'll require, you must work out the pitch of your roof. To determine the pitch, you'll need two rulers and a level. Measure the number of inches from the end of the level down to the roof.

ROOF FLASHING SELECTION CHART

In this example, the pitch is 3/12.
 0/12 - 6/12 Roof Pitch = JSC 6 or 7 AAF
 6/12 - 12/12 Roof Pitch = JSC 6 or 7 AF2

- Used where the chimney passes through a roof with a pitch of Flat to 6/12
- Comes complete with Storm Collar
- All seams are sealed with Silicone Sealant
- Galvalume construction

Support Kits

SUPERPRO HAS PUT TOGETHER 3 CHIMNEY KITS TO GET YOUR PROJECT DONE...

SuperPro has taken the guess work out of chimney installation by putting the most common parts for each installation all in one box. These 3 kits depict the most common installations. Simply decide which of these scenarios fits your need, then pick up your chimney lengths, roof flashing and elbows (if required).

When your chimney goes up through a flat ceiling, then thru the roof, you may choose the MODEL SPR DECORATOR CEILING SUPPORT INSTALLATION KIT - SPR*DCSK-N

- Deluxe Rain Cap
- Adjustable Attic Insulation Shield
- Decorator Ceiling Support
- Stove Pipe Adaptor

NOTE: For a two story application, an additional Firestop Radiation Shield must be installed.

...Now you just need your roof flashing and chimney lengths.

When your chimney goes out a cathedral or open beam ceiling, you may choose the MODEL SPR CATHEDRAL CEILING SUPPORT INSTALLATION KIT - SPR*CCSK

- Deluxe Rain Cap
- Cathedral Ceiling Support
- Draw Band
- Trim Kit
- Stove Pipe Adaptor

...Now you just need your roof flashing and chimney lengths

CATHEDRAL CEILING SUPPORT KIT

6"	SPR6CCSK
7"	SPR7CCSK
8"	SPR8CCSK

When your chimney goes out a wall and then runs straight up, you'll need the MODEL SPR WALL SUPPORT INSTALLATION KIT - SPR*WSK

- Deluxe Rain Cap
- Wall Bands (2)
- Stove Pipe Adaptor
- Wall Thimble
- Stainless Steel Tee
- Adjustable Wall Support (WS) with Non-Twist Lock Insulated Tee Cap

...Now you just need:

- Vertical Chimney lengths
- Through the wall length (must extend at least 3" into the room)
