

Adjustable Attic Insulation Shield

ENGINEERED FOR SAFETY AND PERFORMANCE

The Adjustable Attic Insulation Shield is engineered for safety and performance—designed for use wherever a chimney passes through an open attic space.

Whether you're working with blown-in, batt, or blanket insulation, this shield keeps it securely away from the chimney and prevents it from entering any framed opening.

- Required wherever the chimney enters the attic space
- Maintains 2" clearance to combustibles
- Adjustable from 12" to 22" for flexible installation
- Drop-Down Shield to protect the joist area
- Prevents insulation from entering framed opening or contacting the chimney
